

CONTACTLESS AND CONVENIENT

As we venture back into our workplaces, with new protocols and an ambition to maximise productivity during our time in the office, lunch with colleagues is back on the menu.

Our research indicates that the average time spent deciding, purchasing and waiting for lunch can often use up to half of an employees allocated break time. This is neither efficient or enjoyable, and now also comes with the added risk of multiple touch points being potential exposure sites.

'Many employees say they skip lunch or breaks all together because there is **too much work** and not enough staff to share the load.'

'When deciding what to eat, **convenience is a top priority**, followed by taste, price, and nutritional value.'

FOODIFOX LOCKER SOLUTION

SPEED

- / **Contactless** collection is instant
- / QR code scanning opens the locker and lunch is served

SECURITY

- / All interactions can occur through a mobile device which is **secured** through face ID, fingerprint recognition or passcode

HYGIENE

- / Lockers are equipped with **self-cleaning**, UV technology*

CONVENIENCE

- / With a significant **reduction in touchpoints**, there is no lining up or waiting for food preparation, and the need to interact with germ ridden eftpos machines is completely removed
- / No need to check in and get stuck visiting a site

WHAT OUR CLIENTS SAY...

"The **convenience** of having it all right there in the building and ordering via the app was really appealing. Also, the **fixed menu is a great feature** as it plays perfectly into the concept of the "paradox of choice", by which it's statistically much less likely to be disappointed by a choice or get food envy."
